Project Scheduling Tool

Jira Software

Gantt Chart for Project Schedule

Sprint Schedule

Components

- Login Management System
 - Ticket Management System
 - User Management System
 - Tag Management System
 - FAQ System
-

Login Management System

- Login manager manages the authentication and authorization process of users when they're trying to access the software.
- It typically consists of a login screen where users are required to enter their credentials, such as username and password, to gain access to the system.
- Once the user is authenticated, the login manager grants them access to the support ticketing system and redirects them to the appropriate dashboard or homepage.
- The login manager also ensures that users are automatically logged out after a certain period of inactivity to prevent unauthorised access to the system
- The login manager is also responsible for registering students, support team and admin

Ticket Management System

- The ticket management component is responsible for managing student query from creation to resolution.
- The ticket management component is essential in ensuring efficient and effective handling of student queries.
- The ticket management system enables the student to search, filter and create queries for the relevant topic
- When a student create a query in a particular category, the same is automatically assigned to the relevant support staff.
- The priority level of the ticket is based on the likes the query received from other students
- The ticket management system enables the support staff to view and resolve the ticket assigned to them.
- It also enables the support staff to update the ticket status as FAQ.
- After resolution of the ticket, the system enables the student to mark the query as resolved to close the query

User Management System

It is a vital component of an online support ticketing system that enables the management of different types of users with different levels of access and permissions. It provides a platform to manage and organize user accounts and their associated information.

There are typically three types of users: students, support team members, and administrators. The user management system enables the following functions for each user type:

User Management System(cont..)

1. Students: The user management system allows students to create and manage their user accounts. Students can submit new support tickets and view the status of their existing tickets
2. Support team: The user management system provides support team members with access to the software's ticket management .
 - a. The system assigns and manages tickets based on the support team member's role and permissions.
 - b. Support team members can view and update ticket details.
3. Administrators: The user management system enables administrators to manage the software's overall functionality, including user roles and permissions and ticket workflows.
 - a. Administrators can approve, modify, or delete support accounts and assign or revoke user permissions based on their roles and responsibilities
 - b. This also provides administrator access to Tag Management System.

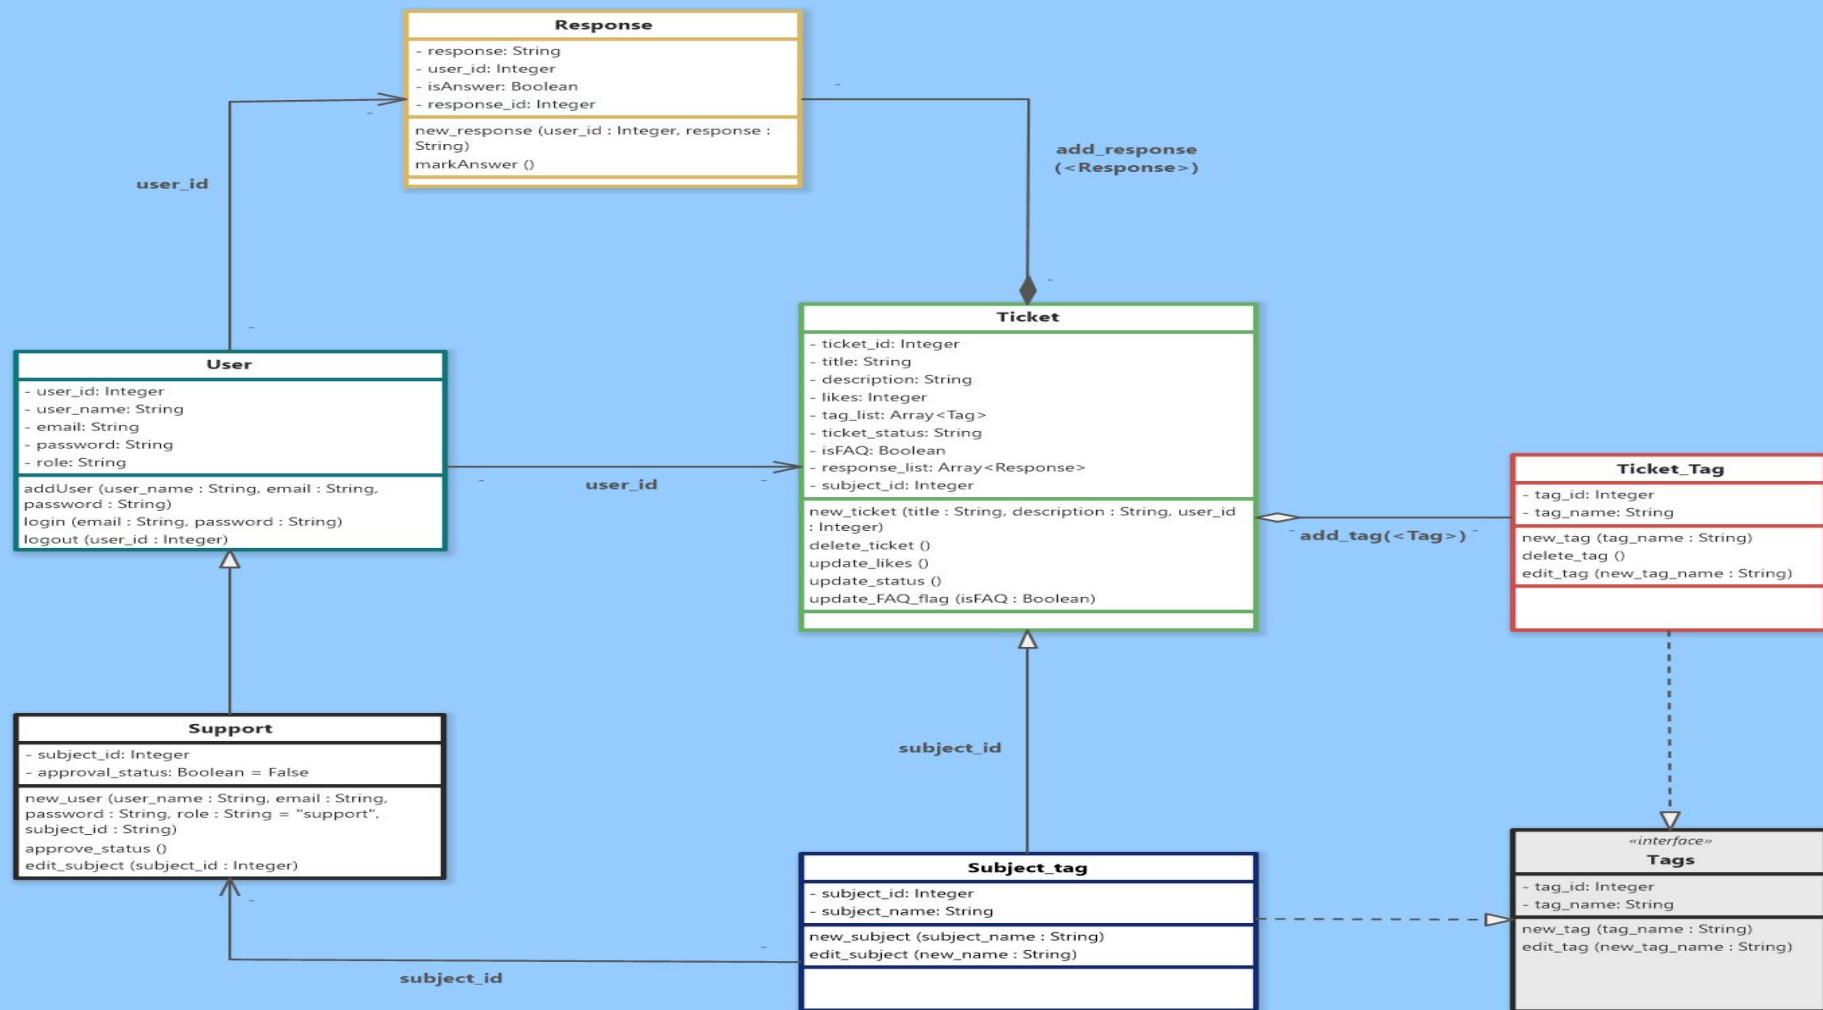

Tag Management System

- The tag management component in a support ticketing software enables the administrator to create and manage tags that can be assigned to tickets.
- Tags are labels that are used to categorize and group similar tickets together.
- It helps in automatic allocation of ticket to the relevant support staff.
- There are two types of tag which are categorised into subject tag and ticket tag.
- The subject tags relates to name of the subject/ course and this tag is automatically assigned during the creation of query.
- The ticket tag is assigned by the student during query submission.
- They allow support teams to easily identify and prioritize specific types of tickets
- It also allows the administrator to edit and delete the tags created.

FAQ System

- The FAQ (Frequently Asked Questions) system in an online support ticketing software allows administrators and support team members to update commonly asked questions and their corresponding answers as FAQ.
- Top 5 FAQ for all primary tags or course are populated on student's dashboard and whereas All FAQs of a particular course are shown when user clicks the particular course and FAQ tab in the course
- In addition to reducing the workload for the support team, the FAQ system also helps reduce student stress by providing student with immediate answers to their questions.
